

SMART YACHT SOLUTIONS - USE CASE

One-Touch Tenderlift Control

Operate your tenderlift safely from your mobile device without relying on an additional remote control.

THE SOLUTION

Safer tender handling without another remote control.

Tenderlift operation is often done during moments where attention is already divided: approaching the yacht, preparing for departure, or handling guests and equipment on deck. With Smarter.Yachts, the tenderlift can be controlled from one familiar interface. Supporting lights such as underwater or boarding lights can be integrated into the same use case, improving visibility and confidence during critical maneuvers.

Key benefits

- No additional remote control required
- Control underwater and boarding lights for safer maneuvers
- Built-in safety stop

KEY POINT 1

No additional remote control required

KEY POINT 2

Control underwater and boarding lights for safer maneuvers

KEY POINT 3

Built-in safety stop

YOUR YACHT. YOUR CONFIGURATION.

Discuss your installation with us.
