

Smart Gangway Control

Give authorized crew members secure gangway control from their own mobile devices.

THE SOLUTION

From one shared remote to secure, flexible control for the entire crew.

On most yachts, the gangway is operated using a single remote control - shared between crew members and often not available when needed. This can lead to delays, inefficiencies, and unnecessary dependency on one device. With Smarter.Yachts, every authorized crew member can operate the gangway directly from their own smartphone. Each user receives secure access, eliminating the need to locate or share a physical remote.

Key benefits

- Individual gangway control for each crew member
- Time-limited access for charter operations
- No dependency on a shared remote control
- Works alongside existing wired remotes

KEY POINT 1

Individual gangway control for each crew member

KEY POINT 2

Time-limited access for charter operations

KEY POINT 3

No dependency on a shared remote control

YOUR YACHT. YOUR CONFIGURATION.
