

SMART YACHT SOLUTIONS - USE CASE

Underwater Light Control

Control and automate your underwater lights with timers and remote access.

THE SOLUTION

Elegant lighting control below the waterline - smart, efficient, and intuitive.

Underwater lights are often installed as an upgrade, which means they are rarely fully integrated into the original control system. Adding dedicated switches at the helm or inside the yacht is often impractical due to limited space and installation complexity.

Key benefits

- Activate underwater lights directly from the app
- Automatic shut-off to protect battery capacity
- No additional switches required onboard
- Remote control before arriving at the yacht

KEY POINT 1

Activate underwater lights directly from the app

KEY POINT 2

Automatic shut-off to protect battery capacity

KEY POINT 3

No additional switches required onboard

YOUR YACHT. YOUR CONFIGURATION.

Discuss your installation with us.

See the complete use case online or contact Smarter.Yachts to discuss integration into your existing onboard installation.
